

ABSTRACT OF THE DISCLOSURE

A sports pole mounting structure for supporting sports equipment in a pool environment capable of repeated assembly and removal. The mounting structure includes a bracket and a
5 collar securely engaging existing in-ground sleeves traditionally found around pool environments and supporting sports equipment for use in a pool. The bracket is configured such that the sports pole is prohibited from rotating in the in-ground sleeve and the combination of the bracket and collar is capable of use with in-ground sleeves of varying size and shape.
